

COUNTER SNEEZE GUARD

The sneeze guard is made of laminated safety glass is scratch-resistant and crystal clear, impact-resistant and, of course, splinter-free. Thanks to the rubber feet, the screen can be quickly placed and even expanded with additional elements. The pass-through function of the screen allows you to keep in touch with your customers safely yet personally. By using the screen, you not only guarantee your employees high-quality protection against infections, but also makes your customers feel safe.

ONLY GLASS OFFERS EFFECTIVE PROTECTION

Effective disinfection against Covid-19 is only possible on glass. Transparent plastics such as acrylic glass cannot withstand treatment with those effective against the Covid-19 virus. These plastics are damaged by disinfection with the agents 62-71% ethanol and 0.1% sodium hypochlorite that are suitable to combat the Covid-19 virus.

Cracks develop, which means that the minimum hygiene standards can no longer be met.
